SUMMARY

Frontend engineer with 4+ years building production web applications in React, Next.js and TypeScript. I work on both halves of a multi-tenant real-estate SaaS — the admin platform where staff configure their site, and the build pipeline that turns that configuration into a live website. Most of my work sits in the framework layer other developers build on top of: config-driven CRUD systems, visual page builders, tenant theming architecture and bilingual Arabic/RTL products.

TECHNICAL SKILLS

Languages: JavaScript (ES2022+), TypeScript, HTML5, CSS3

Frameworks: React, Next.js (Pages & App Router), Gatsby

State & Data: React Query (TanStack), Context API, Redux, REST APIs

UI: Ant Design, Tailwind CSS, Material-UI, design tokens, responsive & RTL layouts, i18n

Tooling: Git, GitHub / Bitbucket, Netlify, Vercel, FFmpeg, PostHog

EXPERIENCE

Frontend Engineer · iCloud-Ready Mar 2023 – Present · Remote

Multi-tenant real-estate SaaS — one codebase generating a different website for every client, plus the admin platform that configures it.

- **Own both sides of the product:** the admin platform where staff configure their site, and the static pipeline that builds and deploys it. Sole frontend developer on the websites codebase through its first year.
- Designed the **config-driven framework** behind the admin platform: one declarative config per entity generates its table, filters, forms, bulk actions and Excel import, replacing per-screen implementations. It became the standard for new modules — the team builds on it rather than around it.
- Built a **visual page builder on both sides:** the authoring UI where non-technical marketers compose a page from a section gallery in English and Arabic with per-element theming, and the renderer that ships it live.
- Delivered an **Arabic-first property portal** for a Saudi real-estate developer from scratch — faceted search, project and unit pages, branded maps, favourites, accounts and an online reservation flow. Filter state is mirrored into the URL and validated against live data, so a shared search link never opens empty. Made Arabic the default unprefixed language for Gulf tenants without breaking the English-default sites.
- Architected **multi-tenant theming:** build-time configuration generates CSS custom properties and design tokens, and each template declares which route families it supports. Onboarding a new client is configuration, not code.
- Shipped an entire **community-management product area solo in four months:** residents and tenancies, gate passes and visitor requests, facility booking, and a configurable service-request system.
- Cut a build hitting an **18-minute hosting ceiling** by replacing ~600 serial image round-trips with a bounded 12-worker pool, and resolved a week of out-of-memory build failures with paginated, incremental, retried data fetching.
- Migrated four entity types from multi-step to single-step creation **without breaking records created under the old flow**.

Stack: React, Next.js, Gatsby, TypeScript, React Query, Ant Design, Tailwind CSS, Parse, AWS S3, Netlify

Frontend Developer · AWSStreams Jul 2021 – Oct 2022

- Rebuilt the **OZZ.me** web application in vanilla JavaScript, replacing a legacy frontend.
- Built the internal admin dashboard from scratch in React, Redux and Material-UI.
- Customised WordPress sites for client delivery and optimised UI rendering performance.
- Worked directly with backend engineers on API shape and data flow to keep client-side state handling simple.

Stack: JavaScript, React, Redux, Material-UI, WordPress

EDUCATION

BSc, Civil Engineering · Higher Technological Institute (HTI), 10th of Ramadan City · 2012 – 2018

CERTIFICATIONS & LANGUAGES

Certifications: React, TypeScript and SQL — Complete Developer's Guide (Udemy) · JavaScript — Complete Guide (Academind)

Languages: Arabic (native) · English (professional working proficiency)
